```csharp
static void Main(string[] args)
{
    Console.WriteLine("Please enter price: ");
    int price = int.Parse(Console.ReadLine());

    Console.WriteLine("Please enter discount percent: ");
    int discount = int.Parse(Console.ReadLine());

    int result = price - (price * discount / 100);
    Console.WriteLine($"The new price after the discount is: {price}");
}
```
